Toshiba NB205 N330PK Key Cleaning

This guide addresses how to remove, clean, and replace individual keys from the keyboard assembly (3 Steps).

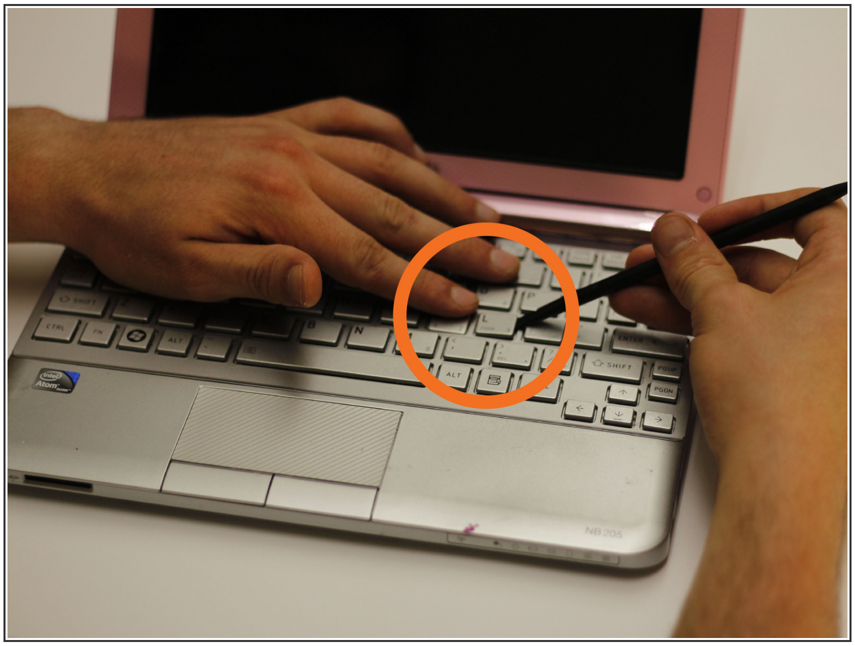

Written By: Mason McCaskill

TOOLS:

- Spudger (1)
- Detailing Brush (1)

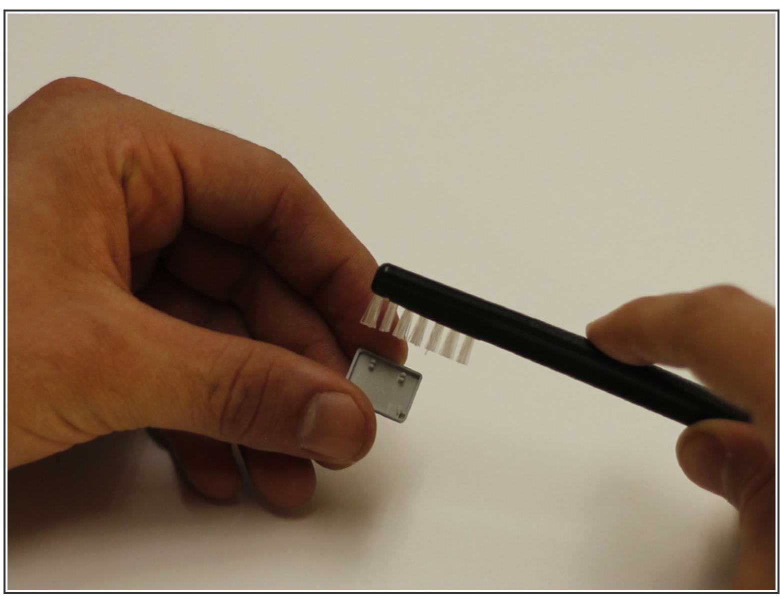

Step 1 — Toshiba NB205 N330PK Key Cleaning

- Using the spudger, gently pry the desired key up on one side. This will release the key.

- The key is held in place by very small plastic pieces. Improper removal or installation may damage key permanently and require entire keyboard replacement.

Step 2

- Use a brush to remove debris and use a cleaner cloth to remove residue.
- Similarly, remove debris and residue from the area of the keyboard where the key was originally seated.

Step 3

- Once clean, set the key above its original position and firmly press it back into place.
- If cleaned and installed properly the key should depress smoothly and spring back to normal position once released.

This is a complete guide to removing a key and cleaning the area before replacement.
